

## Java

```
class Solution {  
    public int findContentChildren(int[] g, int[] s) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {number[]} g  
 * @param {number[]} s  
 * @return {number}  
 */  
var findContentChildren = function(g, s) {  
  
};
```

---

## C++

```
class Solution {  
public:  
    int findContentChildren(vector<int>& g, vector<int>& s) {  
  
    }  
};
```

---

## C#

```
public class Solution {  
    public int FindContentChildren(int[] g, int[] s) {  
  
    }  
}
```

---
